Assignment 8.1 - Examining Browser History

Screenshot #1:

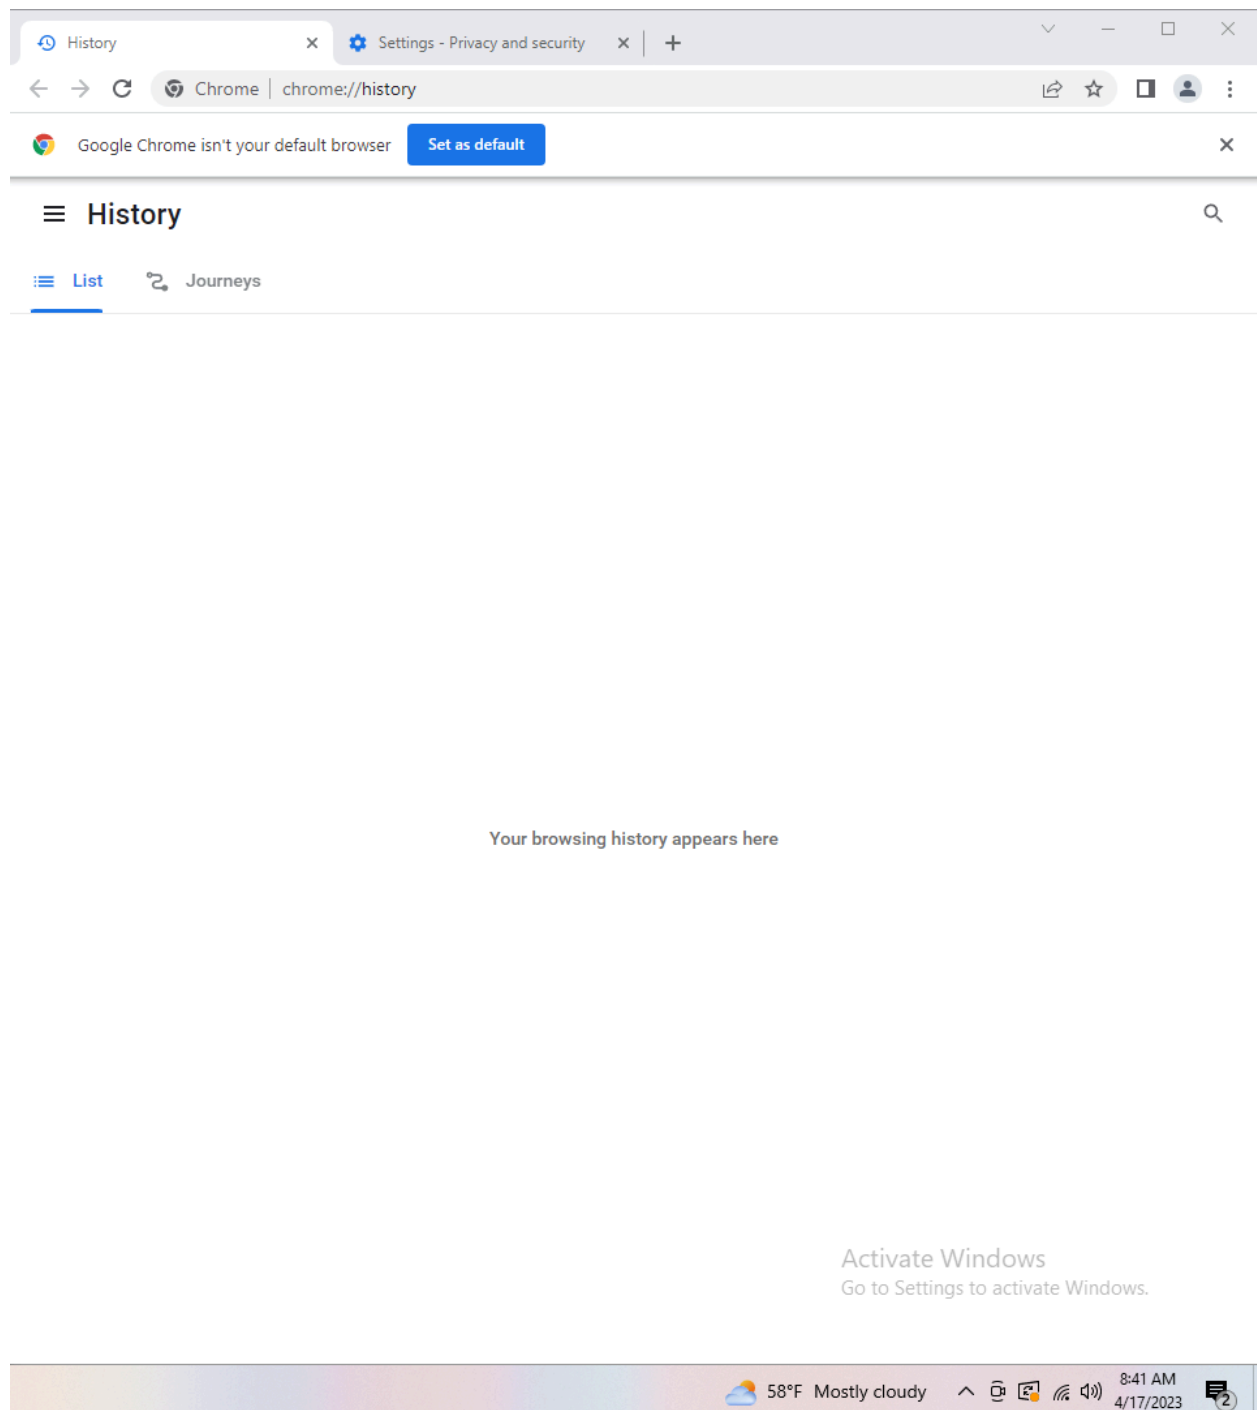

Above is the first screenshot of the lab, which required me to open a browser. The browser I chose was Google Chrome. I was instructed to press Ctrl-H to get to the browser history. This is done as a control picture to test the deletion of a certain day's data. Nothing was difficult yet.

Screenshot #2:

The above screenshot is an image of the result of me deleting the past week of browser history. The lab indicated one, but for some reason I deleted an entire week's worth of browser history. This can be seen in contrast of the months between my browser history. You can see I accessed it on April 17, and April 10 - per screenshot 1. Screenshot 2 however shows that the most recent browser history after that is from February. Mostly because I rarely use Google Chrome.

Screenshot #3

The above is a screenshot shows what happens when you delete your history entirely on the google chrome web browser. It was a very simple process. This is something everyone should do as I believe clearing your history is a form of cyber hygiene. We leave a digital footprint everywhere we go, so why not utilize the tools to cover them?
